

MONITORING AND EVALUATION OF THE HIV CASCADE

PRESENTED BY: MS. SELENA LEWIS

Monitoring and Evaluation Officer
Strategic Information Component
HIV/STI/TB Unit
Ministry of Health and Wellness

OBJECTIVES

1. To know the data source for Jamaica's HIV cascade
2. To build the HIV cascade
3. To identify the gaps in the HIV cascade

DATA SOURCE FOR THE MONITORING AND EVALUATION OF JAMAICA'S HIV CASCADE

TREATMENT SITE INFORMATION SYSTEM 2 (TSIS2)

TSIS2 is a centralized web-based system that links all HIV treatment sites across Jamaica. These include the public and private sites. It is designed to facilitate better management of people living with HIV (PLHIV). This system is critical to achieving our national priority areas and collates key indicators for the monitoring and evaluation of the epidemic in Jamaica.

PAGINATED REPORTS (28)

 All clinical encounters (de-identified) ...	 All viral loads (de-identified) ...	 All viral loads since 2019 (de-identified) ...	 ARV Prescriptions - all years (de-identified) ...	 ARV Prescriptions 2019 onward (de-identified) ...	 PLHIV By Parish (de-identified) ...
 PLHIV Currently on ARV (de-identified) ...	 PLHIV Data Quality Issues (de-identified) ...	 PLHIV Defaulters (de-identified) ...	 PLHIV Eligible for Viral Load (de-identified) ...	 PLHIV Linked To Care (de-identified) ...	 PLHIV Lost To Follow Up (de-identified) ...
 PLHIV Missed Appointments (de-identified) ...	 PLHIV Newly Initiated (de-identified) ...	 PLHIV Newly Linked (de-identified) ...	 PLHIV Newly Registered (de-identified) ...	 PLHIV Not Linked (de-identified) ...	 PLHIV Not Virally Suppressed (de-identified) ...
 PLHIV on ART by Line (de-identified) ...	 PLHIV On Register (de-identified) ...	 PLHIV On Register By Month (de-identified) ...	 PLHIV Registry (de-identified) ...	 PLHIV Seen (de-identified) ...	 PLHIV Treatment Failure (de-identified) ...
 PLHIV Unstable patients (de-identified) ...	 PLHIV Virally Suppressed (de-identified) ...	 PLHIV With Persistent Low Level Viremia (de-identified) ...	 PLHIV With Suspected Treatment Failure (de-identified) ...		

TSIS REPORT DATA PULL

TSIS is a database that is always being updated

Select a date in the month to pull the report from TSIS to represent the reporting period.

Example: the 5th day of each month

For a February 2025 report the TSIS report would be pulled in March 5, 2025.

THE 7 DATA ELEMENTS/PILLARS OF THE NATIONAL HIV CASCADE

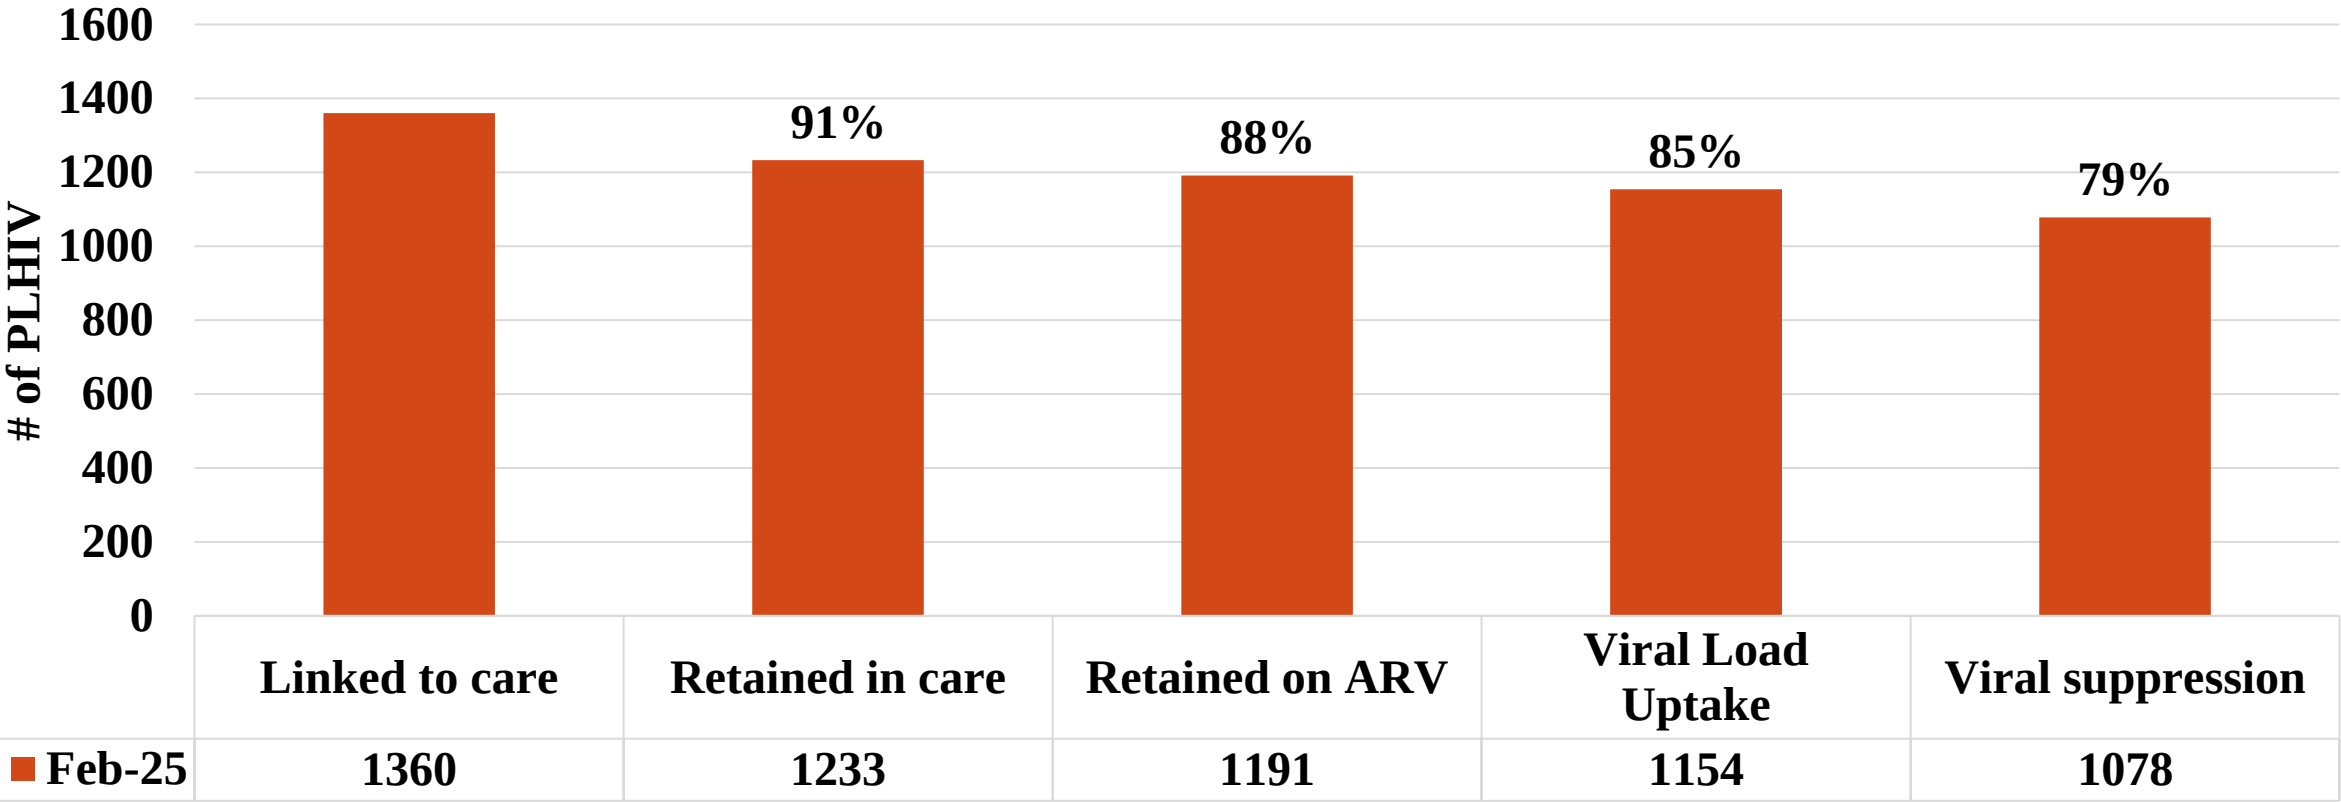

1. PLHIV Estimated
2. PLHIV Diagnosed
3. PLHIV Linked to Care
4. PLHIV Retained in Care
5. PLHIV Retained on ARVs
6. PLHIV Viral Load Uptake
7. PLHIV Viral Suppression

THE NUMBERS REPRESENT ACTUAL PEOPLE

1 =

Site's HIV Treatment Cascade Febraury 2025

1ST PILLAR (LINKED TO CARE)

Definition: Number of PLHIV seen by a clinician for HIV treatment.

All PLHIV On Register are linked to care.

A bar chart with a single orange bar. The bar is positioned on a white background with horizontal grey grid lines. Below the bar, the text 'Linked to care' is written in a bold, dark grey font. Below that, the number '1360' is written in a bold, dark grey font. The entire chart is enclosed in a dark red border.

Linked to care

1360

2ND PILLAR (RETAINED IN CARE)

PLHIV who:

- have a future appointment OR
- last missed appointment was less than 90 days.

Filter for:

Retained in Care (1 – yes)

2ND PILLAR (RETAINED IN CARE)

$$\text{Retained in care \%} = \frac{\text{Retained in care}}{\text{Linked to care}}$$

3RD PILLAR (RETAINED ON ARV)

PLHIV who are:

- retained in care AND
- with a first ARV date and a current prescription date exceeding the reporting period.

Filter for:

1. retained in care (1 – yes)
2. retained on ARV (1 – yes)

3RD PILLAR (RETAINED ON ARV)

$$\text{Retained on ARV \%} = \frac{\text{Retained on ARV}}{\text{Linked to care}}$$

85%

**Viral Load
Uptake**

1154

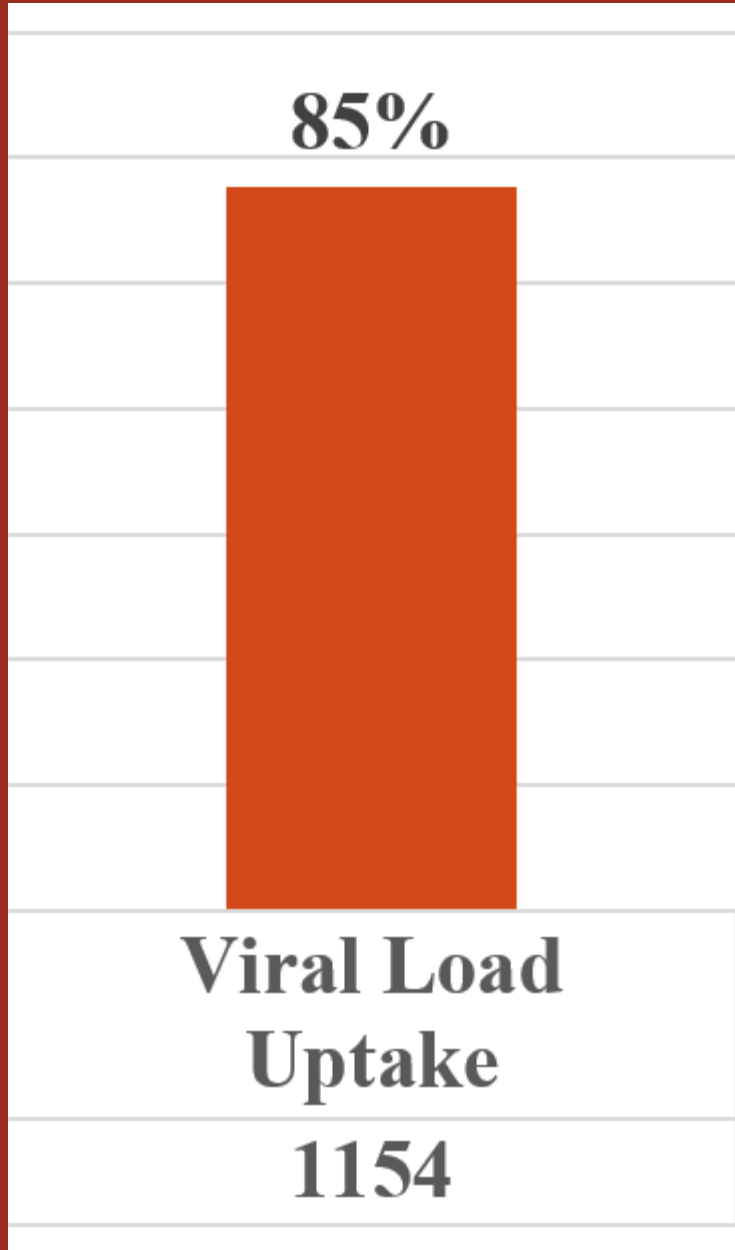

4TH PILLAR (VIRAL LOAD UPTAKE)

PLHIV who are:

- retained in care AND
- retained on ARV AND
- with a valid viral load test

PLHIV are eligible for viral load test:

1. Six months after initiation on ARV
2. Six months after last unsuppressed viral load
3. Six months after first suppressed viral load
4. Twelve months for suppressed clients with two consecutive valid suppressed viral load results.

4TH PILLAR (VIRAL LOAD UPTAKE)

Filter for:

1. retained in care (1 – yes)
2. retained on ARV (1 – yes)
3. last vl still valid (1 – yes)

$$\text{Viral Load Uptake\%} = \frac{\text{Viral load uptake}}{\text{Linked to care}}$$

5TH PILLAR (VIRAL SUPPRESSION)

PLHIV who are:

- retained in care AND
- retained on ARV AND
- with a valid viral load uptake AND
- whose viral load is <1000 copies/ml

Filter for:

1. retained in care (1 – yes)
2. retained on ARV (1 – yes)
3. last vl still valid MOH (1 – yes)
4. last vl suppressed (1 – yes)

5TH PILLAR (VIRAL SUPPRESSION)

$$\text{Viral Suppression \%} = \frac{\text{Viral suppression}}{\text{Linked to care}}$$

GAPS IN THE HIV TREATMENT CASCADE

LOST TO FOLLOW-UP (missed appointment > 90 days)

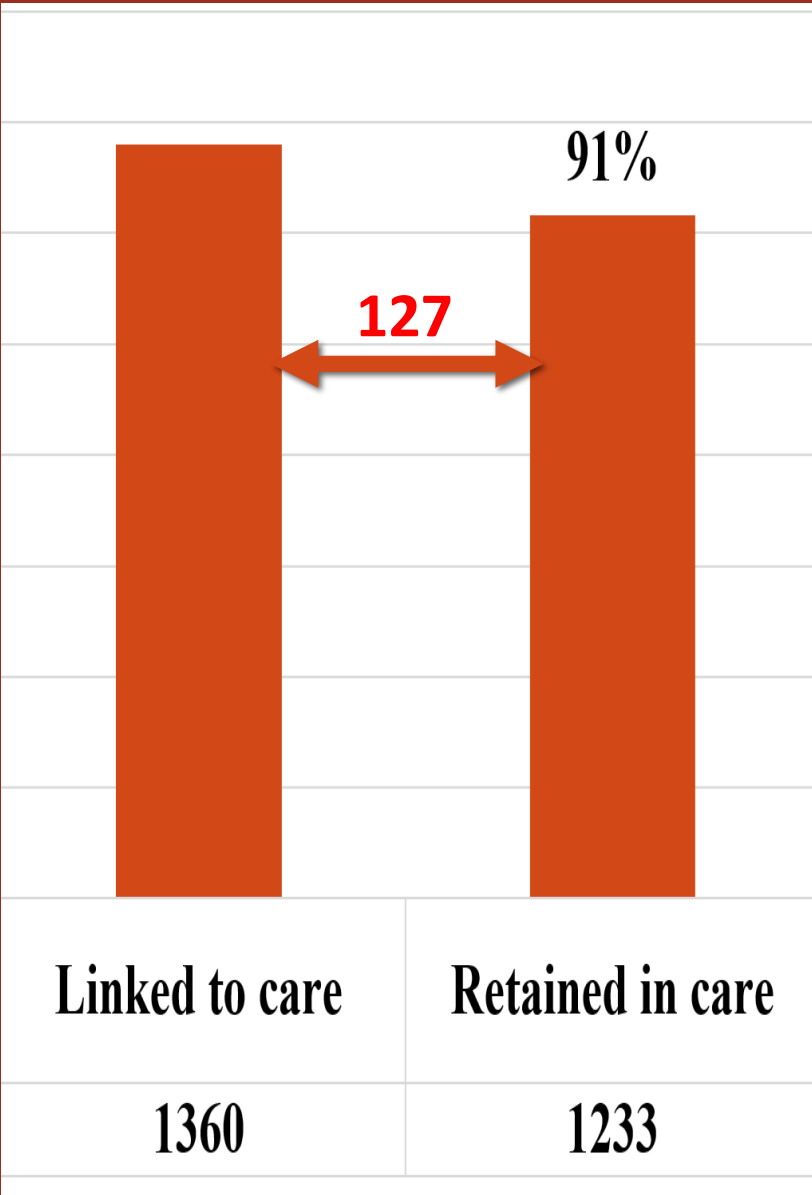

Lost to follow-up = linked to care – retained in care

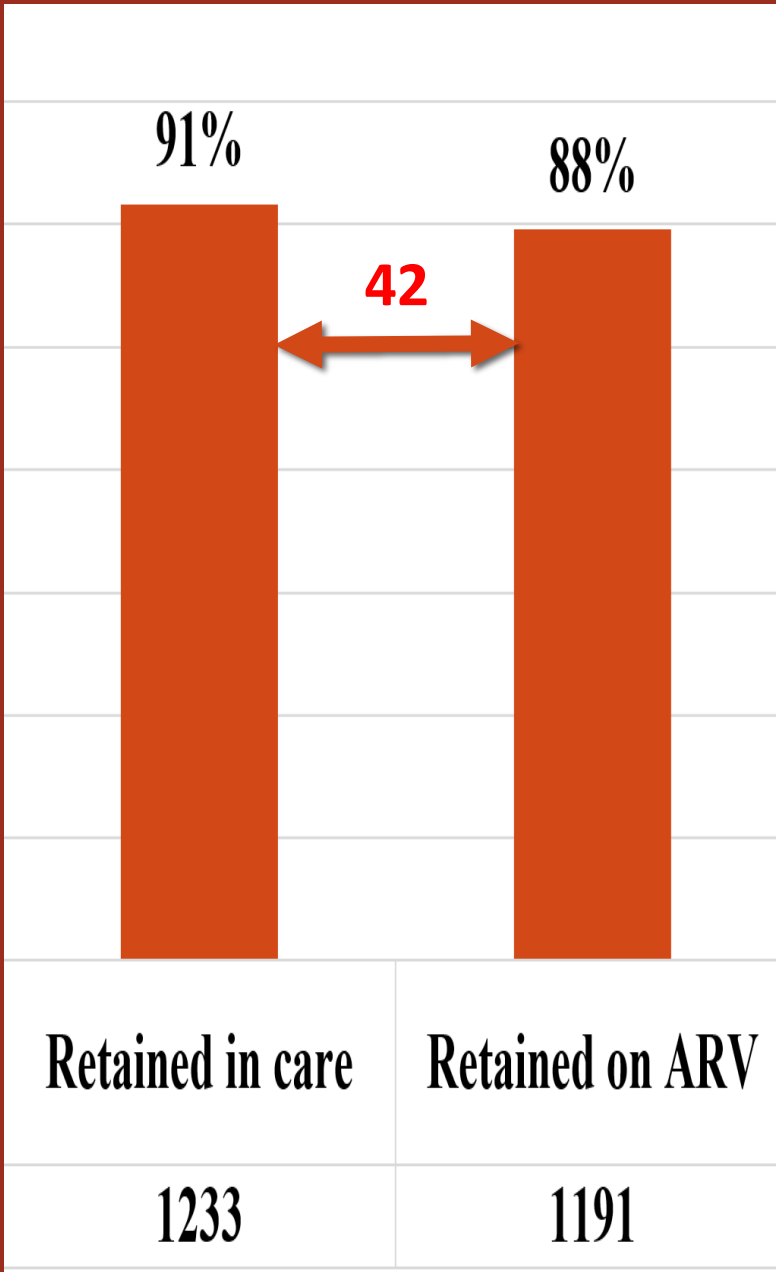

$$1360 - 1233 = 127$$

127 PLHIV lost to follow up

Factors resulting in this gap:

- Not sending transfer, merger or case closure requests to the SI component and following up to ensure they have been actioned.
- Timeliness of data entry
- Follow up with PLHIV to understand their situations to have them returned to care.

NOT RETAINED ON ARV

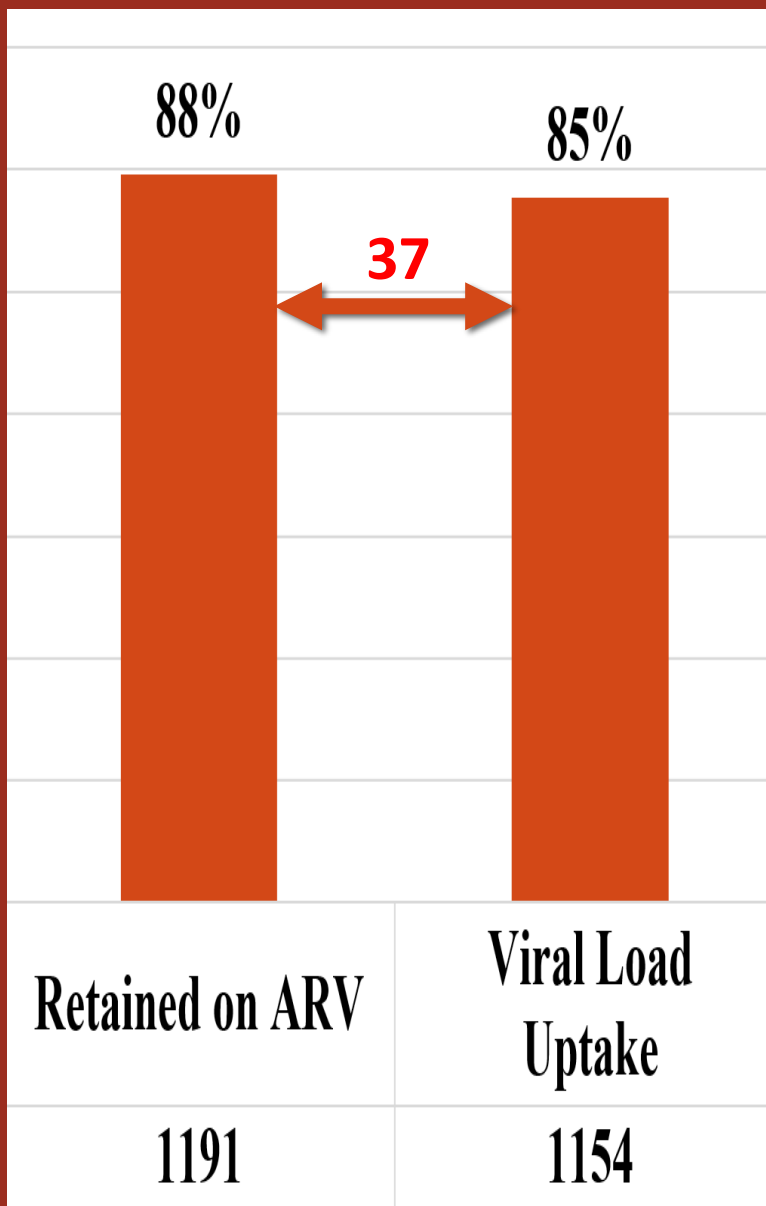

Not retained on ARV= retained in care – retained on ARV

$$1233 - 1191 = 42$$

42 PLHIV not retained on ARV

Factors resulting in this gap:

- Prescription end date entered expires before the next appointment date. Ensure the prescription end date matches or exceeds the next appointment date.
- Missed appointments (1 – 45 days) and defaulters (46 – 90 days)
- Timeliness of data entry
- ARV naïve clients

NO VALID VIRAL LOAD UPTAKE

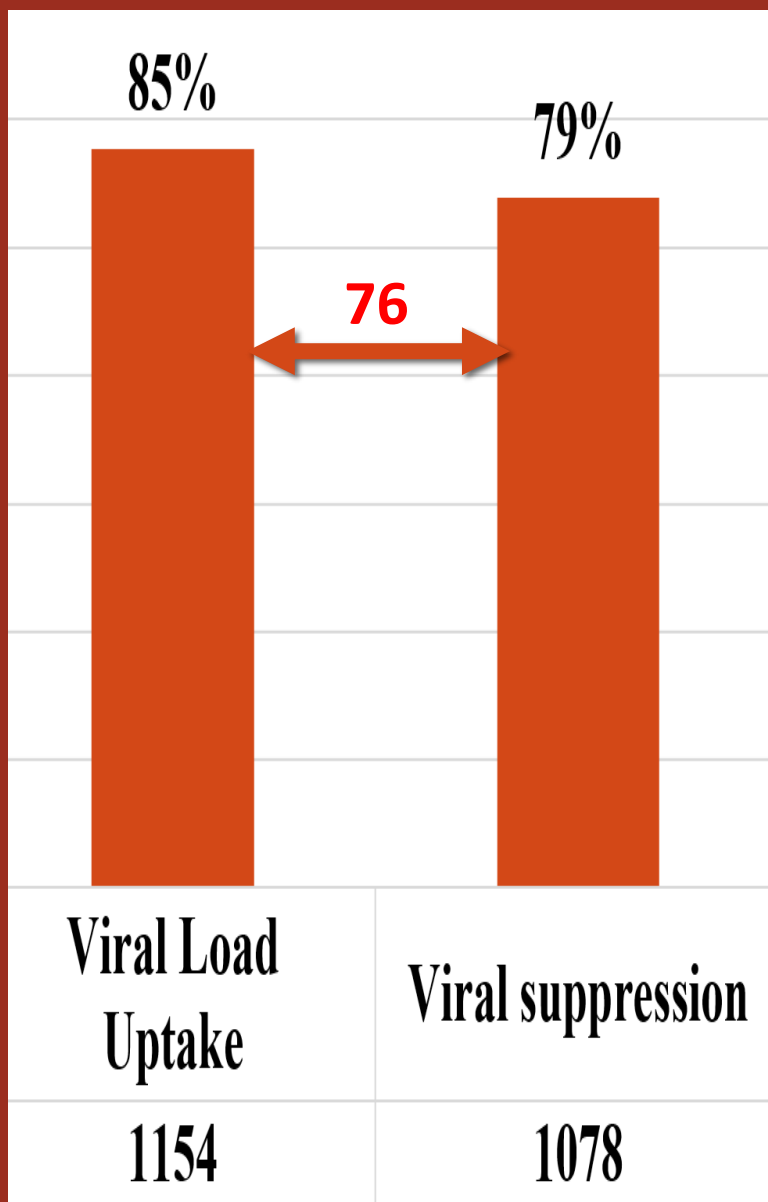

No Viral Load Uptake = retained on ARV– viral load uptake

$$1191 - 1154 = 37$$

37 PLHIV with no valid viral load uptake

Factors resulting in this gap:

- Newly initiated on ARV (<6 months)
- Past due clients
- Lab issues (long turn around time, sample issues)

NOT VIRALLY SUPPRESSED

Not virally suppressed = viral load uptake– viral suppressed

$$1154 - 1078 = 76$$

76 PLHIV not virally suppressed

Factors resulting in this gap:

- Unsuppressed clients
- Outdated VL results
- Data Entry

A large, bold, black question mark is centered on the top card of a stack of white cards. The cards are fanned out slightly, showing multiple layers. The entire stack is placed on a dark, textured wooden surface with visible grain patterns.
