

WESTERN REGIONAL HEALTH AUTHORITY HIV PREVENTION DATA QUALITY AUDIT REPORT 2026

Strategic Information Component
MINISTRY OF HEALTH AND WELLNESS
Submitted July 24, 2026

Executive Summary

The 2026 Data Quality Audit (DQA) aimed to evaluate the effectiveness and reliability of HIV prevention data management across various parishes within the Western Regional Health Authority (WRHA) in light of the impact of Hurricane Melissa. The Audit involved analyzed entries made to District Health Information System 2 (DHIS2) between October 1 to December 31, 2025, across targeted populations. The Audit also sought to identify areas for improvement and to enhance the quality of data for effective HIV and Syphilis services management.

The DQA focused on quality, completeness, and reliability of prevention data reported in the DHIS2 against the data source outreach registers. Eleven (11) core indicators related to client demographics, outreach activities, HIV and syphilis testing were evaluated. A total of 3,333 entries from October to December 2025 were eligible for assessment, of which 2,637 (92%) were assessed.

The audit found mixed outcomes in the accuracy of several key indicators. Matching rates for Syphilis and HIV results increased from 84% in 2025 to 97% in 2026 and 85% in 2025 to 82% in 2026 respectively. Targeted population identified also decreased from 97% in 2025 to 95% in 2026. The accuracy for Year of birth, Month and Day of birth all decreased to 98% while Sex retained 99% in 2026. Outreach officer's name and Date of activity also maintained their level of accuracy at 100% and 99% respectively. Additionally, First name in its inception to the Audit achieved a score of 98%, exceeding the national target of 95%. Although multiple indicators slightly declined, these findings demonstrate strengthened data capture practices and greater consistency in recording critical client-level information, which enhances the reliability of programme monitoring and reporting.

The audit identified sustained effort to ensure data quality however there are significant weaknesses that affected overall performance. The proportion of outreach register entries fully aligned with DHIS2 slightly increased from 73% in 2025 to 79% in 2026. Commendably, the overall data accuracy increased significantly from 73% to 96%. These findings point to persistent growth and challenges in data entry, reconciliation, and the timely upload of outreach records into DHIS2.

The implications of these findings are significant, incomplete or unmatched records compromise the integrity of programme data, potentially leading to underreporting of services delivered, inaccurate assessment of programme performance, and suboptimal resource allocation. Reduced confidence in reported data may also limit the programme's ability to accurately monitor coverage, identify service gaps, and demonstrate progress toward national HIV prevention targets. Furthermore, discrepancies between source documents and DHIS2 increase the risk of inaccurate strategic and operational decision-making.

Data management and storage practices were strong, achieving a regional score of 100%, operational challenges remained evident such as unreliable internet connections and limited access to devices. These factors contributed to delays in data entry, incomplete uploads, and reduced performance.

Overall, WRHA received a DQA compliance score of 79%, resulting in a “Needs Improvement” rating. Parish-level scores ranged from 66% in Hanover to 85% in Westmoreland, indicating that data quality challenges are region-wide rather than isolated (See table 1). Although improvements in indicator-level accuracy demonstrate progress in data collection practices, the data completeness, register-to-DHIS2 alignment, and overall audit scores highlight the need for strengthened data reconciliation processes, routine quality assurance activities, enhanced staff capacity, and timely entry of all outreach records into DHIS2. Addressing these issues will be critical to ensuring that prevention programme data accurately reflect service delivery and can effectively support evidence-based planning, monitoring, and decision-making.

Table 1: Data Quality Compliance Rating 2026

Parish	DQA Score	Compliance Rating
Hanover	66%	Needs Improvement
St James	81%	Needs Improvement
Trelawny	78%	Needs Improvement
Westmoreland	85%	Good
WRHA	79%	Needs Improvement
