Purpose of the Manual

This manual provides step-by-step guidance on using DHIS2 for event data entry and data analysis.

Overview of DHIS2

DHIS2 is a health information management system used for collecting, analyzing, and visualizing data. This manual covers the Event Capture app for data entry and the Pivot Table and Event Reports apps for data analysis.

Getting Started

Logging into DHIS2

Each user should have his/her own private user account with username and password. Each user account is associated with a set of user roles that defines which part of the system the user can see and access. Each user has a private dashboard that can contain items that are relevant to the user.

1. Open your web browser and navigate to the DHIS2 login page https://prevention.moh.gov.jm/dhis

NB: If you do not see the screen as shown in Figure 1, you have entered an incorrect URL

2. Enter your username and password.
3. Click the **Login** button to access the system.

Figure 1. Login Screen.

Once logged in, you will be greeted with your default dashboard or the last dashboard that was used before logging out. See figure 2 below.

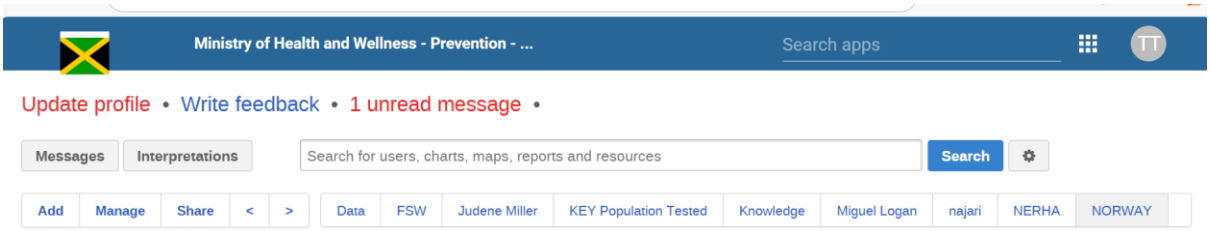

Figure 2. Current dashboard.

Changing Your Password

1. After logging in, click on your profile name at the top-right corner. See Figure 3

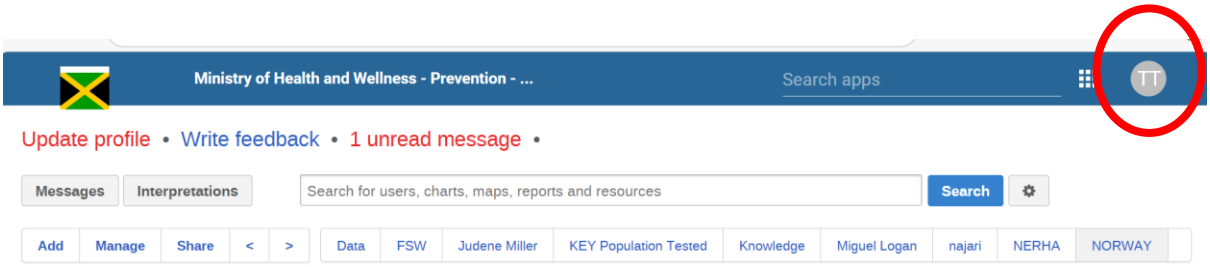

Figure 3. Profile name.

2. Select **Account** from the dropdown menu.

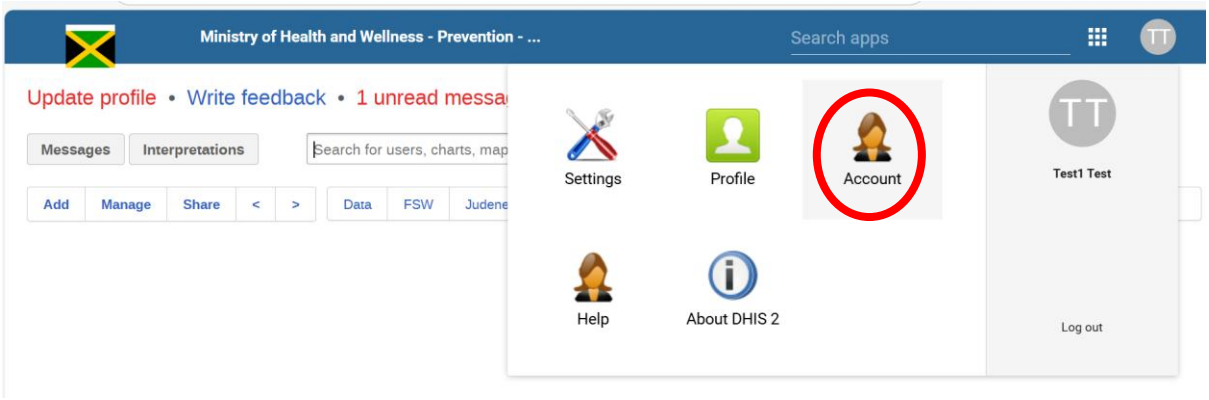

Figure 4. Selecting account.

3. Enter your current password in the “Old Password” field, enter your new password in the “New Password” field, then re-enter the password in the “Repeat New Password” field and click **Update Password**.

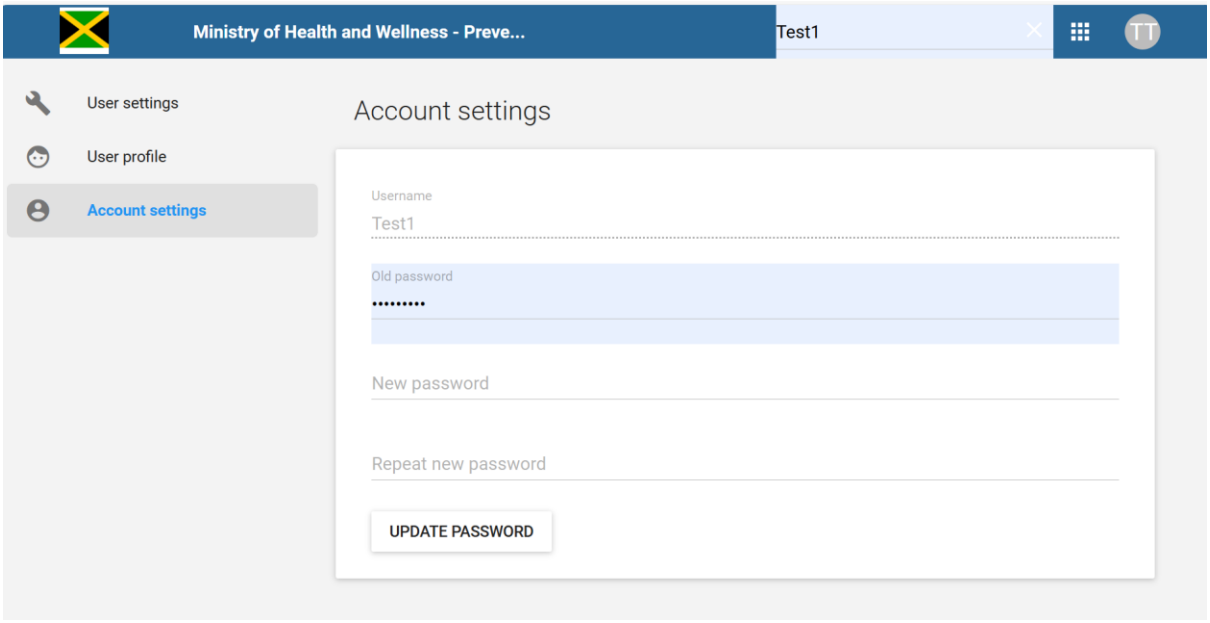

Figure 5. Updating user's password.

Data Entry with Event Capture: Accessing the Event Capture Application

1. From the DHIS2 main dashboard, click on the **Applications** menu (nine little squares).

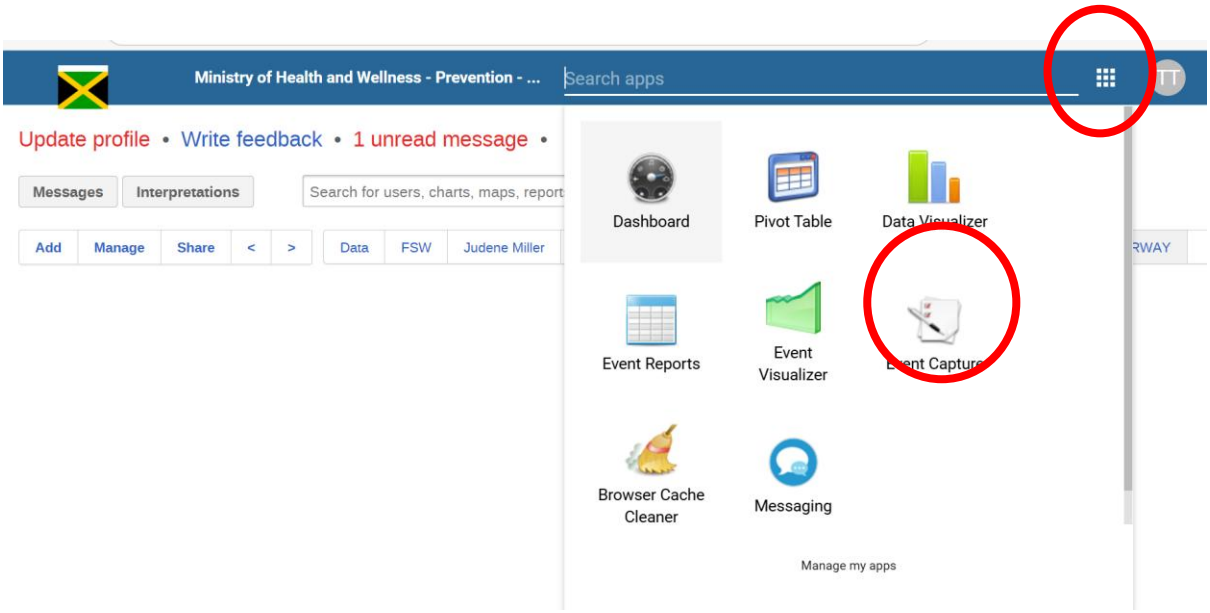

Figure 6. Selecting the event capture application to enter data.

2. Then select **Event Capture** from the list of applications.

Selecting an Organization Unit and Programme

1. By default, all users are assigned to only one organization unit (entity/facility). When you select the event capture application, you will see the organization unit you are assigned to on the left of the screen.

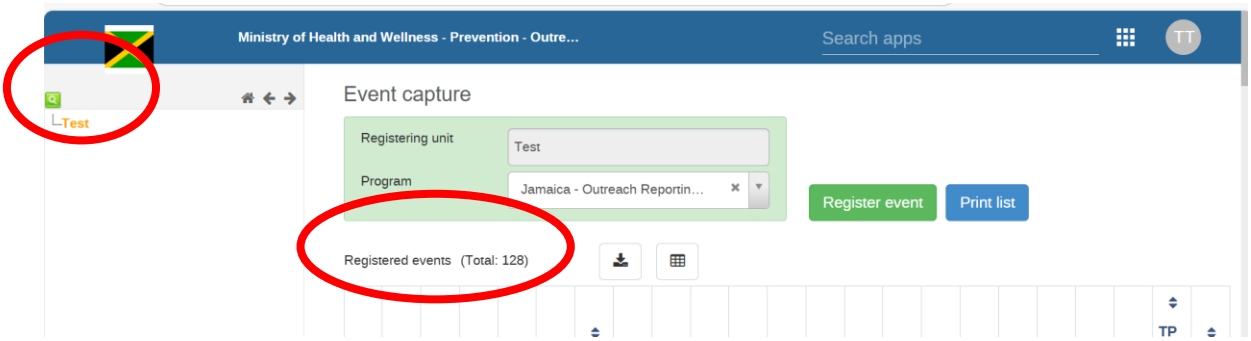

Figure 7. Organization unit user is assigned to programme and button to register a new client.

2. Also on the same screen (Figure 7), you can see the total number of entries for that organization unit (Registered events).

Entering Event Data

Click **the register event button** to enter new data.

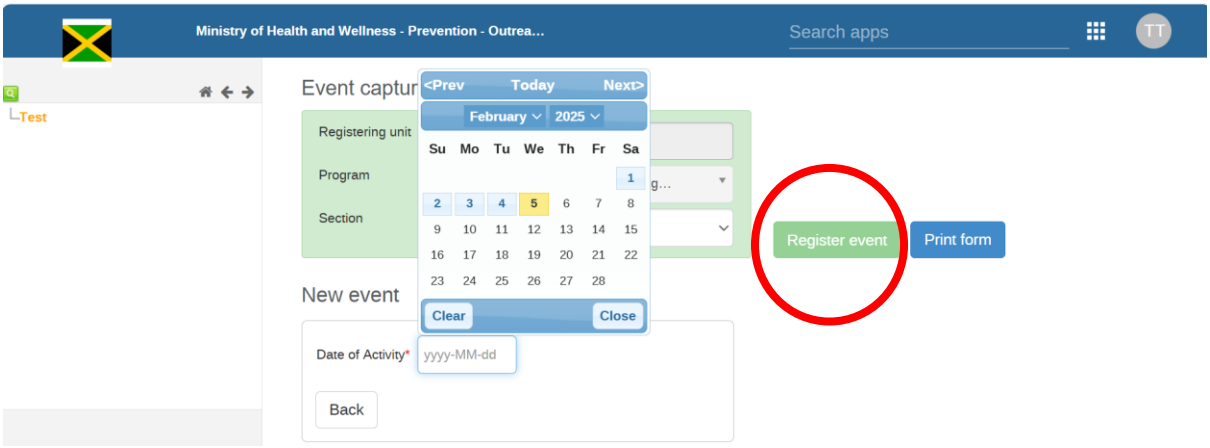

Figure 8. Entering event data.

Fill in the "Date of Activity" date and the outreach form will be displayed below the date.

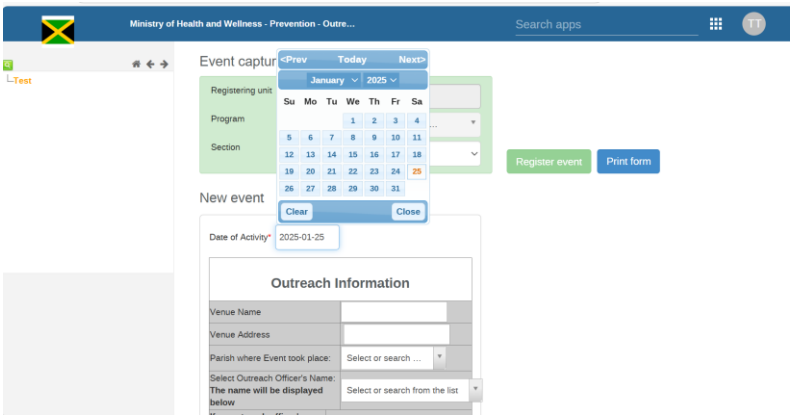

Figure 9. Outreach form displayed after entering the date of activity.

The outreach form is divided into section with each section heading in bold.

Outreach Information Section

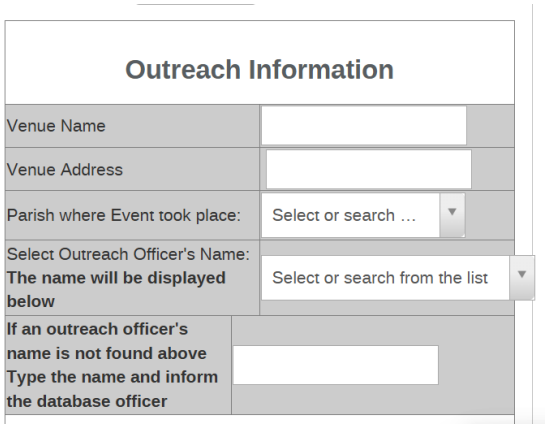

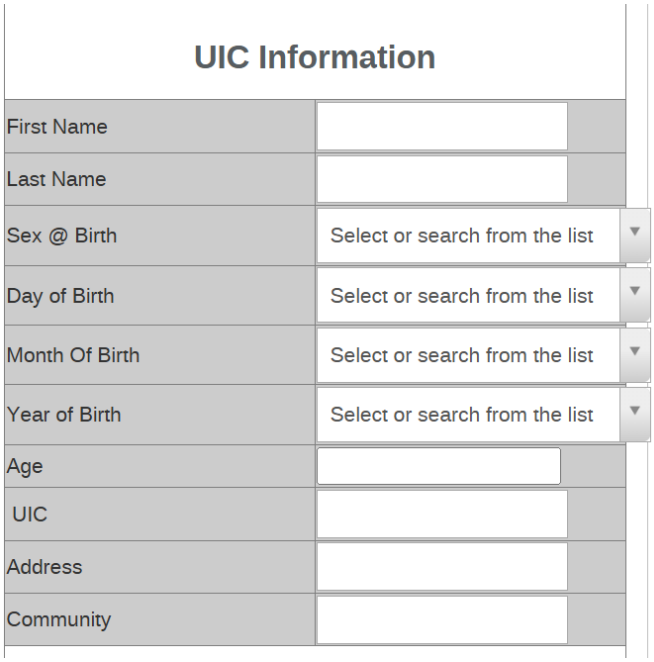

Figure 10. Outreach section: Information about the outreach location and outreach officer.

The outreach information section contains information on where the location of the event, the parish and the outreach officer who conducted the intervention.

Unique Identifier Code (UIC) Information Section

UIC Information	
First Name	
Last Name	
Sex @ Birth	Select or search from the list
Day of Birth	Select or search from the list
Month Of Birth	Select or search from the list
Year of Birth	Select or search from the list
Age	
UIC	
Address	
Community	

Figure 11. UIC section: demographic information about the client.

The UIC information section contains demographic information about the client such as the first and last name, sex, day, month and year of birth, the age, address and community. The UIC is a system generated ID and the user does not need to enter any data in this field.

Risk Assessment

Targeted Behaviour Addressed	
	☐ 2. VCT
☐ 3. Promote Condom and Lubricant use	☐ 4. Stigma and Discrimination
☐ 5. Seeking Care for STIs	☐ 6. Partner Reduction
☐ 7. Violence Reduction (including GBV)	☐ 8. Substance Abuse
☐ 9. Anal/Genital Care	☐ 10. Abstinence
☐ 11. Basic Facts on HIV	☐ 12. Promotion of Family Planning Methods
☐ 13. Promote PrEP	☐ 14. Promote HIVST

Figure 12. Behaviour addressed section: the various behaviours addressed with the client.

The targeted behaviour addressed information sections contains information on what was discussed with the client in terms of behaviour to change or behaviours that can be risky for the client

Risk Behaviours Identified

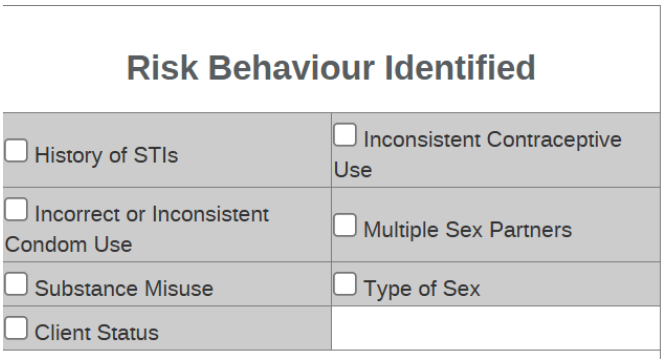

Figure 13. Risk behaviour identified: the behaviour identified from the client.

The risk behaviour identified section contains information the outreach officer would have picked up from the discussion with the client that will cause risk. The client status is automatically generated and should not be ticked or unticked.

HIV, Syphilis and PrEP Referral Section

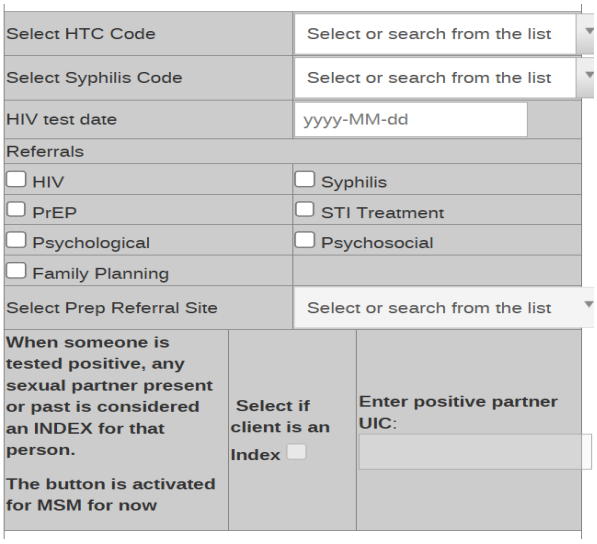

Figure 14. HIV, Syphilis & PrEP section: results of the HIV & syphilis test and any referral.

The HIV, syphilis and PrEP referral section contains details on the result of the HIV and syphilis test as well as if the client was referred for HIV or other services. If the client was referred for PrEP, the referred site should be entered.

HIV Self-Test Section

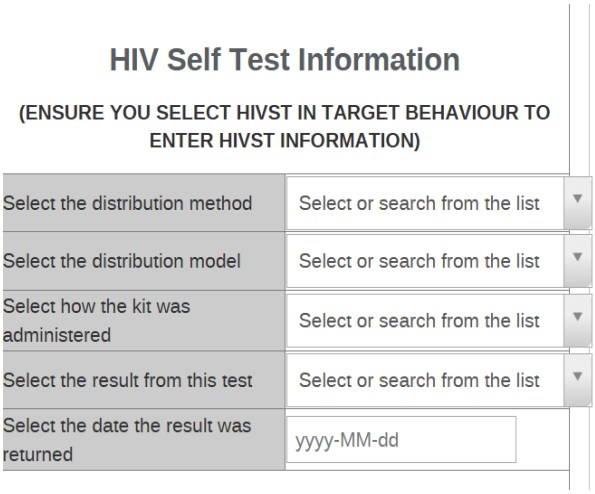

Figure 15. HIV Self-test information.

HIV Self-test information section contains information on the method and model of distribution of the self-test kit. It also contains how the client used the kit and if the result was shared with the outreach officer. If the result was shared, the date the result was shared should be saved as well.

Peer Navigation Section

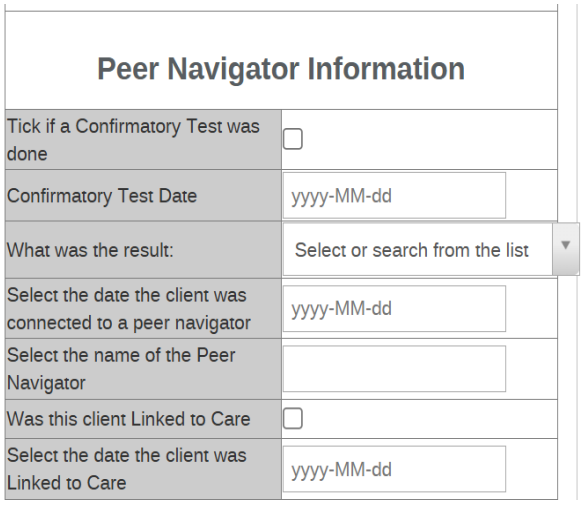

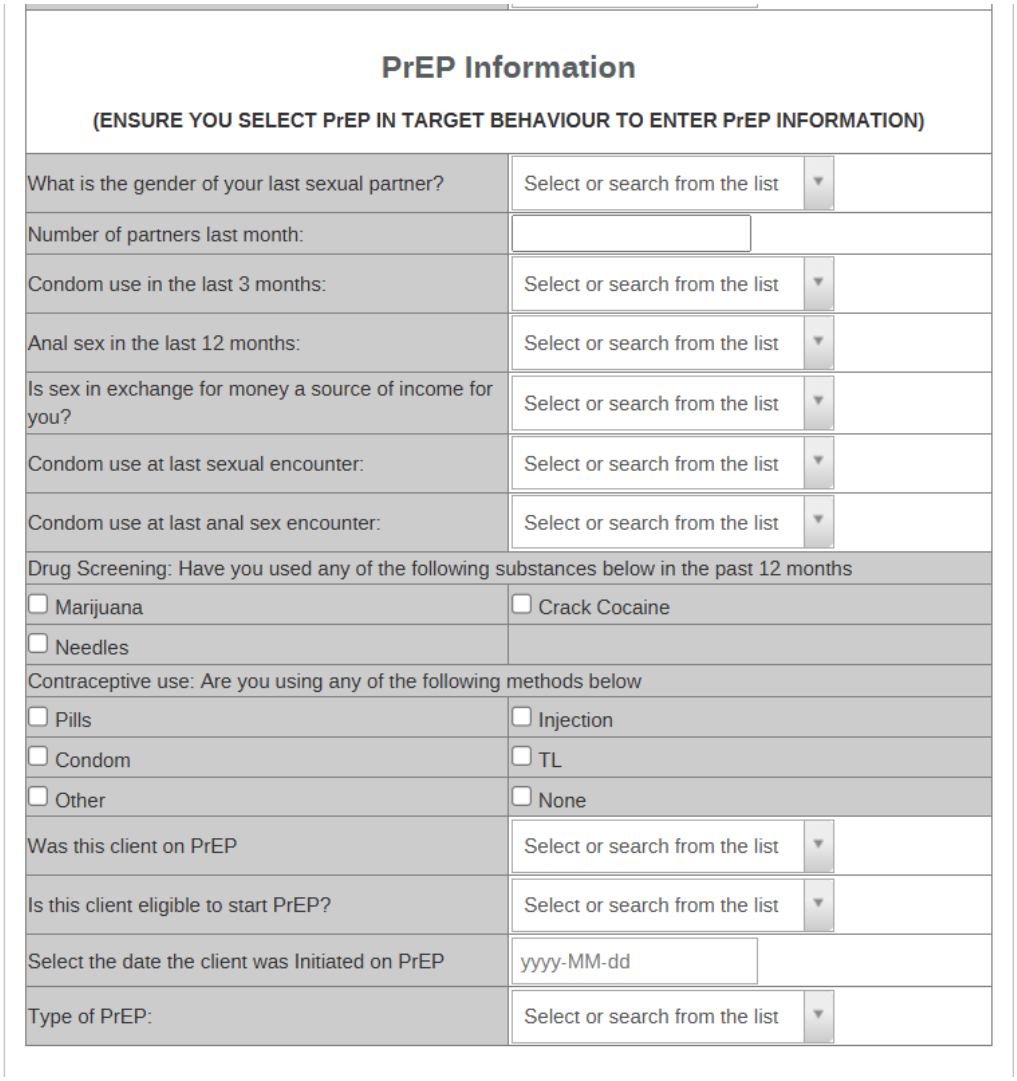

Figure 16. Peer navigation section.

Peer navigation information section should be completed once the client has done a confirmatory test. This section should also capture the result of that test, the date of the test, if the client was connected to a peer navigator and if the client was linked to care.

PrEP Section

PrEP Information

(ENSURE YOU SELECT PrEP IN TARGET BEHAVIOUR TO ENTER PrEP INFORMATION)

What is the gender of your last sexual partner?	Select or search from the list
Number of partners last month:	
Condom use in the last 3 months:	Select or search from the list
Anal sex in the last 12 months:	Select or search from the list
Is sex in exchange for money a source of income for you?	Select or search from the list
Condom use at last sexual encounter:	Select or search from the list
Condom use at last anal sex encounter:	Select or search from the list
Drug Screening: Have you used any of the following substances below in the past 12 months	
☐ Marijuana	☐ Crack Cocaine
☐ Needles	
Contraceptive use: Are you using any of the following methods below	
☐ Pills	☐ Injection
☐ Condom	☐ TL
☐ Other	☐ None
Was this client on PrEP	Select or search from the list
Is this client eligible to start PrEP?	Select or search from the list
Select the date the client was Initiated on PrEP	yyyy-MM-dd
Type of PrEP:	Select or search from the list

Figure 17. PrEP section.

PrEP information section is to be filled by either the outreach officers who provided event driven PrEP or the treatment team. This section contains information on the client's sexual history, if they have or are using drugs, if they are on any contraceptive, their previous PrEP history and if they are eligible to start PrEP and if yes when they started.

After filling out the respective sections, check the "event completed" box and then click on either **"Save and add new"** button if you have several event data to enter. You will have to enter the event date (Date of Activity) before the data entry form will show.

"Save and go back" button to take you back to the records entered page which shows how much records have been entered into the system. You can also see a list of the last 50 records entered.

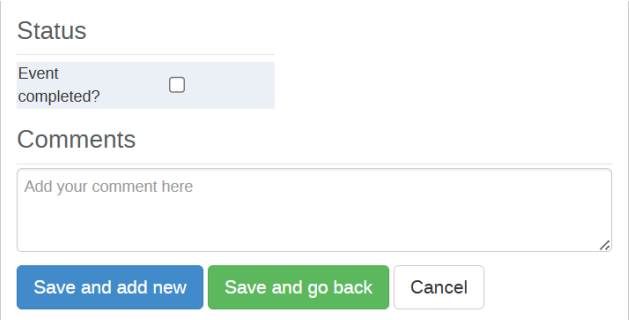

Figure 18. Different ways of saving a record.

Searching, Editing and Deleting Records

Searching a record

If you wish to search any record for either editing, deleting or reviewing, this can be accomplished using any field on the records entered page.

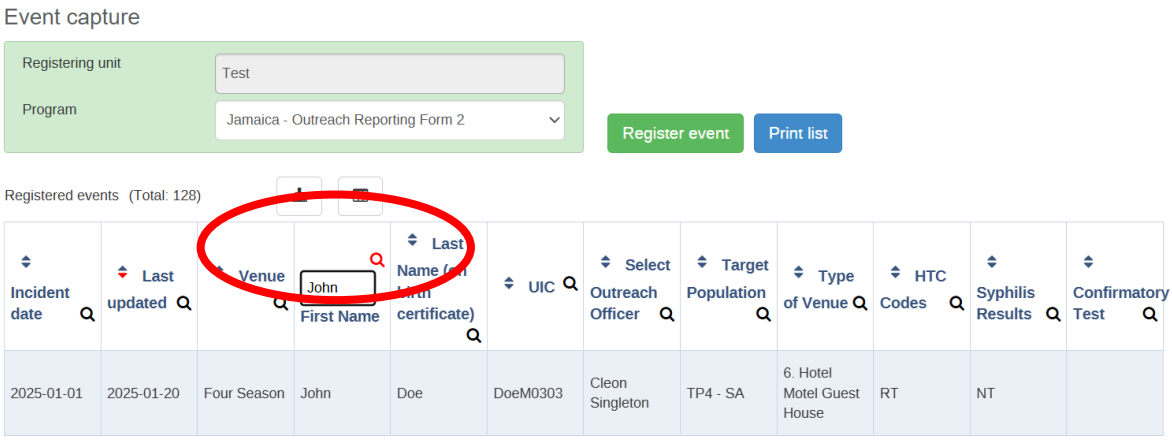

Figure 19. Using a magnifying glass to specify the search criteria.

Use the magnifying glass in each column heading to specify the search criteria. Type the pattern for text field and click on the red magnifying glass. The more information you type, the narrower the records returned.

Editing a record

In case of editing a record, once you have found the client record you are looking for, click on the record and select edit to be taken to the outreach form with the client's information or select edit in grid to edit the record in the search result.

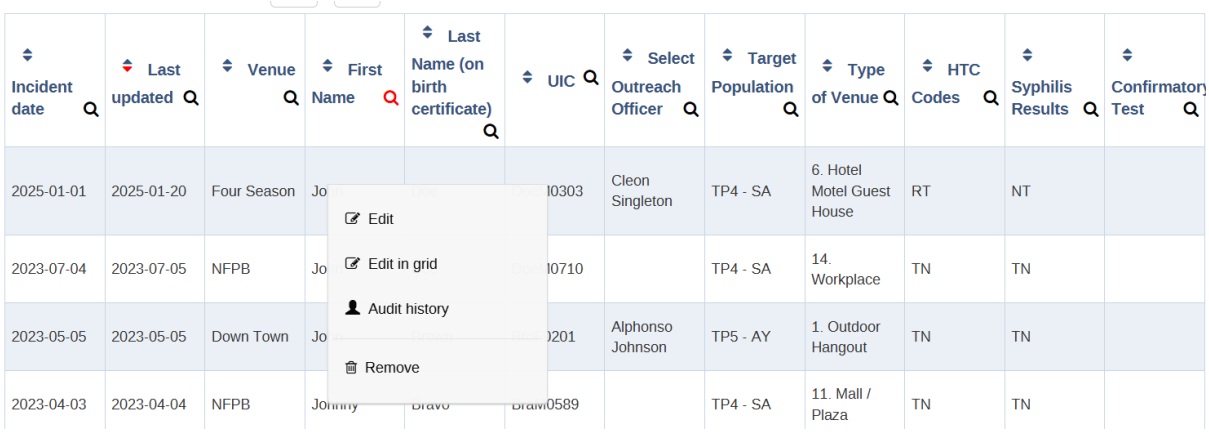

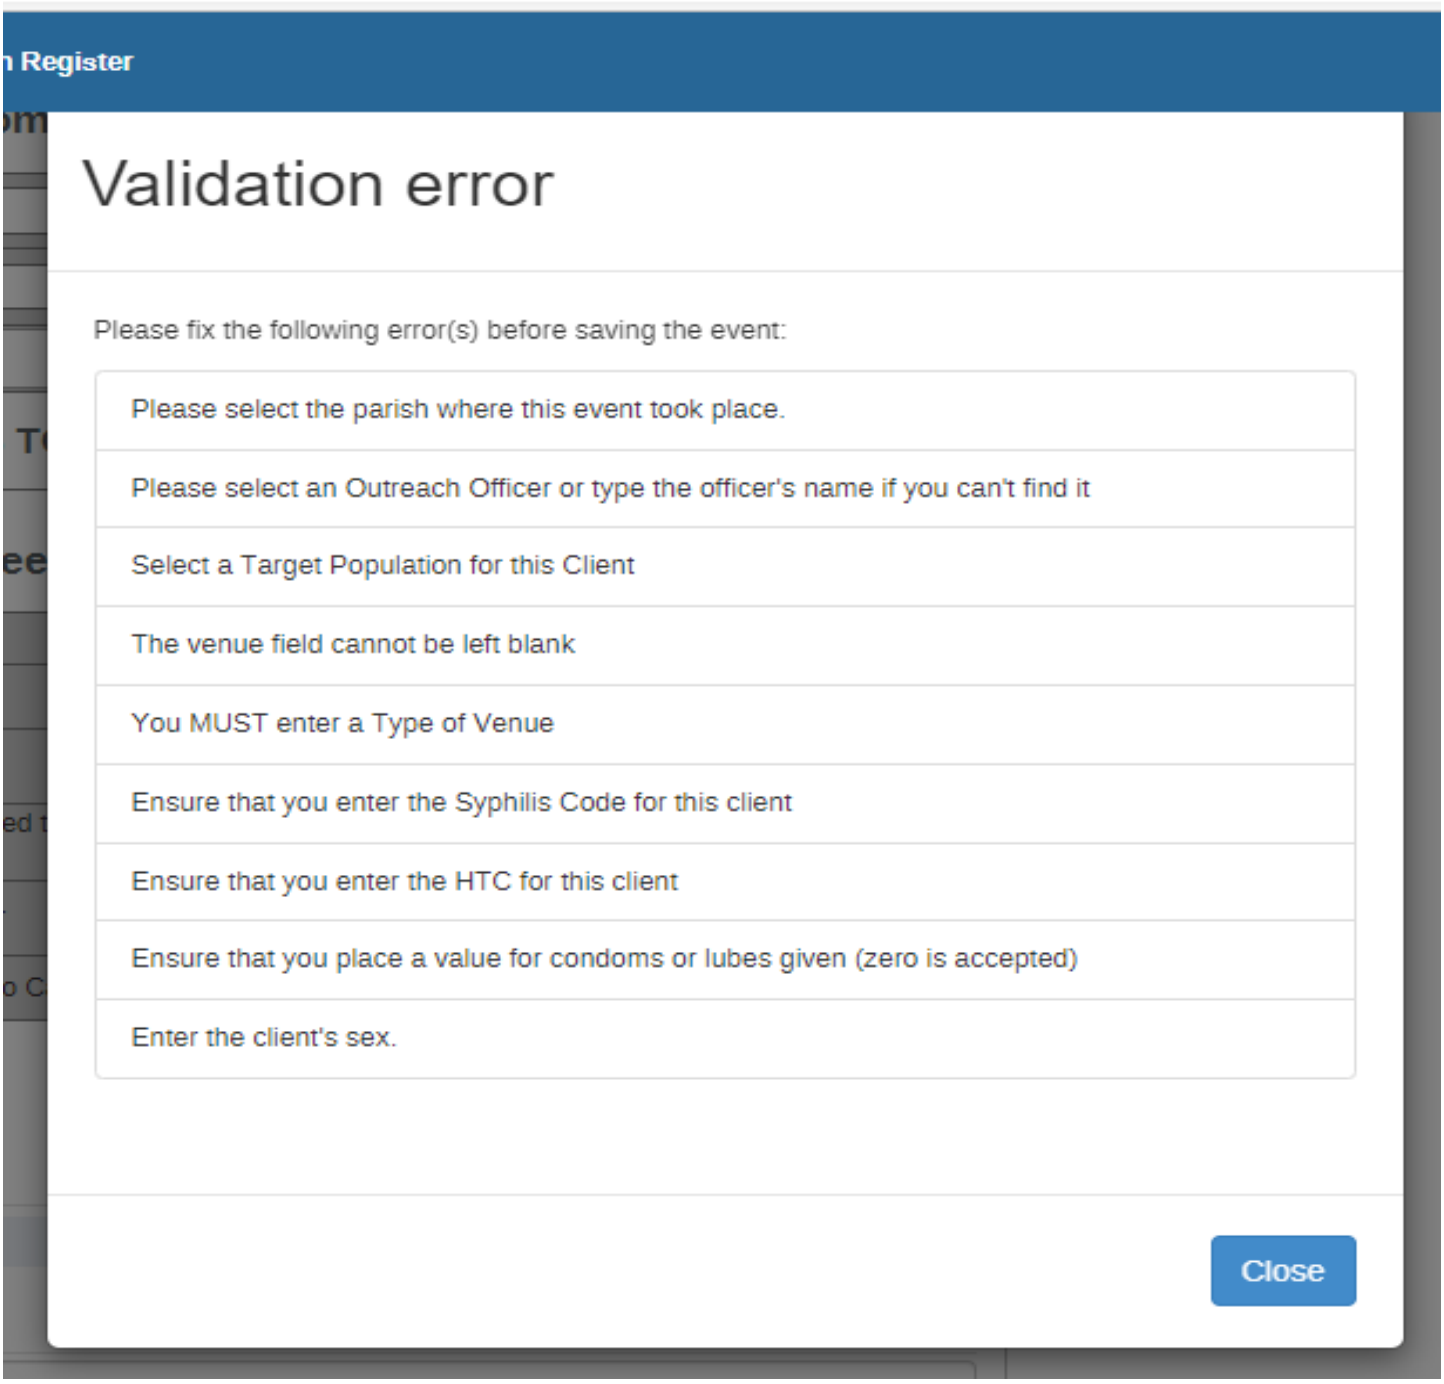

Figure 20. Editing a record.

Completing Each Field

- Venue – the location where the event/activity was held, it could be a place or street i.e. Cross Roads, Mother's Cross Roads etc.
- Venue Address: Enter this information if the venue has an address. E.g. 123 Old Rope Rd.
- Outreach Officer's Name/Selection – the name of the outreach officer who did the reach/test
- Parish of Activity – the parish where the outreach event took place
- First Name – the client's first name
- Last name – the last name of the client who was reached or tested, if reached the first three letters of the last name must be recorded if the full name is not given
- Parish of Residence – the parish where the client is currently residing
- Sex – this is what the outreach officer sees as the client's sex which is either M or F
- Day of Birth – the two digit for day the client was born i.e. 05, It is required for reach or test
- Month of Birth – the two digit for the month the client was born i.e. 11, it is required for test
- Year of Birth – the last two digits for the year the client was born i.e. 1998 use 98
- Age – the clients age during the reach or test activity\event
- UIC – a unique code generated by the system
- Address/Community – the address or community where the client resides
- Target Population – the code which represents the population that was reached or tested i.e. Gen Pop is TP 4
- Type of venue – a classification that describes the venue of the activity
- Targeted Behaviours Addressed – used to specify all behaviours that was discussed/demonstrated with the client
- Risk Behaviour Identified – used to specify if any risk was identified during interaction with the client
- HTC (HIV Testing & Counselling) Code– specify the result of the HIV test or a reason why a test was not administered. E.g. DT for declined testing
- Syphilis Code – specify the result of the Syphilis test or if no test as administered. E.g. NT for no test
- HIV Test Date – The date that the test was done.
- Referrals: Select if this client was referred for HIV, Syphilis, PrEP, STI Treatment etc.

- Index Testing – a tick which indicates if the client that was tested resulted from an index partner
- Contact number – a number where the client can be reached.
- No of condoms given – a number (including zero) that states the amount of condoms a client receives
- No of lubes given - a number (including zero) that states the amount of lubes a client receives
- Distribution Method – Select either primary or secondary if self-test kit was given
- Distribution model – Select community, facility or pharmacy on the model of distribution
- Kit Administration – select if it was assisted or unassisted administration
- Administration result – select the result if the client returned their result
- Result date – enter the date the result was returned.
- Confirmatory test done – tick the box if a confirmatory test was done for the client
- Confirmatory date – enter the date the client did the confirmatory test
- Result – select the result of the test
- Connected – enter the date the client was connected to a peer navigator
- Peer Navigator – select the name of the peer navigator the client was connected to
- Linked – tick the box if this client was linked to a treatment site
- Date Linked – enter the date this client was linked to a treatment site
- Last partner gender – select the gender of the client last sexual partner
- Number of partners last month – enter the number of partners the client interacted with last month
- Condom usage last 3 months – state if the client had used a condom in the last three months
- Anal sex in the last 12 months – state if the client has had anal sex in the last 12 months
- Sex exchange for money – state if sex is exchange for money as a source of income for the client
- Condom used at last sexual encounter – state if the client used condom in last sexual act
- Condom used at last anal sexual encounter – state if the client had used condom in last anal sexual encounter
- Drug screening – select if the client had been screened for Marijuana, Crack cocaine or needles
- Contraceptive use - select if this client is on any of the following contraceptives: Pills, Injection, Condoms, Tubal Ligation, other or none
- On PrEP – state if the client was on PrEP
- Medically Eligible for PrEP – state if this client is medically eligible for PrEP
- Start PrEP – state if this client is able to start PrEP
- Date Initiated – state the date the client was initiated on PrEP
- Type of PrEP – state the type of PrEP this client is taking.

LIST OF ERRORS AND HOW TO CORRECT THESE ERRORS

ERROR	DESCRIPTION & FIX
Please select the parish where this event took place.	You did not select any Value for the Parish of Event. Select a Parish.
Please select an Outreach officer or type the officer's name if you can't find it.	You did not select an Outreach Officer or Type an Outreach Officer's name. Look for the Outreach Officer's name in the drop down list or type the Name if it is not found in the drop down list.
Select a Target Population for this client.	You did not select any value for the Target Population. Select a Target Population.
The Venue Field cannot be left blank.	You did not enter any value for the Venue. Enter a Venue.
You MUST enter a Type of Venue.	You did not select any value for the Type of Venue. Select a Type of Venue
Ensure that you enter the Syphilis Code for this client.	You did not select a code for syphilis test. You need to select one of FOUR codes including the code if no test was done.
Ensure that you enter the HTC code for this client.	You did not select a code for HIV test. You need to select one of SIX codes including the code if no test was done.
Ensure that you place a value for condoms or lubes given (zero is accepted).	You did not enter the amount of condoms/lubes given. You need to enter the amount of condoms/lubes given or zero (0) if none was given.
Enter the clients Sex.	You did not select any value for the Sex. Select a Sex for this client.

Data Quality Guidelines

This section outlines the core data quality activities and best practices required to maintain the integrity, reliability, confidentiality, and security of data DHIS 2 database. The DHIS2 database relies primarily on outreach registers as the main source for data entry; therefore, all data entered into the system must accurately reflect the information documented in outreach registers, referral forms, and related programme records.

Data Quality Activity	Definition	Recommended Actions	Responsible Individuals
Completeness	The extent to which all required client information, outreach activities, service delivery records, and reports are fully captured in the DHIS2 database without omissions.	• Monitor completion of outreach registers prior to data entry. • Conduct routine reconciliation between outreach registers, summary forms, and DHIS2 entries. • Generate monthly completeness reports to identify missing records or data elements. • Follow up with facilities, outreach teams, and community-based organizations regarding incomplete documentation • Train staff on required programme indicators and outreach documentation standards.	Behaviour Change and Communication Officer, Community Peer Educator
Accuracy	The degree to which data entered into DHIS2 correctly reflects the information documented in	• Conduct regular source document verification exercises comparing DHIS2 entries against outreach registers.	Behaviour Change and Communication Officer, Community Peer Educator

	outreach registers and supporting source documents.	•Verify reported outreach activities, referrals, and service access data before entry into DHIS2. • Implement routine supervisory reviews of entered records. • Correct identified discrepancies promptly and document amendments where necessary.	
Timeliness	The extent to which outreach data is entered, updated, submitted, and reported in DHIS2 within established reporting timelines after documentation in outreach registers.	•Establish clear timelines for submission and entry of outreach data. • Enter outreach information into DHIS2 immediately after receipt of completed outreach registers whenever possible. • Monitor reporting timelines • Send reminders to facilities and outreach teams regarding reporting deadlines. • Conduct routine follow-up with late-reporting sites or teams.	Strategic Information Component, Behaviour Change and Communication Officer, Community Peer Educator
Consistency	The degree to which outreach data remains uniform and coherent across outreach registers, summary reports, DHIS2 datasets, and related programme information systems over time.	• Reconcile data between outreach registers, summary forms, referral logs, and DHIS2 reports. • Reinforce the use of standardized outreach tools, indicator definitions, and reporting procedures across all sites. • Conduct periodic trend analyses to identify unusual fluctuations or inconsistencies.	Behaviour Change and Communication Officer, Community Peer Educator

		• Perform routine cross-checks between monthly, quarterly, and annual reports. • Review duplicate or conflicting entries and resolve discrepancies promptly.	

Best Practices for DHIS2 Data Entry

The following best practices should be followed to improve data quality within the DHIS2 database:

- ✅ Review all entries against outreach registers before saving.
- ✅ Update records immediately after receiving completed outreach documentation.
- ✅ Conduct routine weekly reviews of entered records.
- ✅ Verify outreach activities, referrals, and service access data prior to entry.
- ✅ Ensure all mandatory fields are completed before submission.
- ✅ Report and correct identified discrepancies promptly.
- ✅ Maintain proper filing and storage of outreach registers for future verification.

Confidentiality and Security

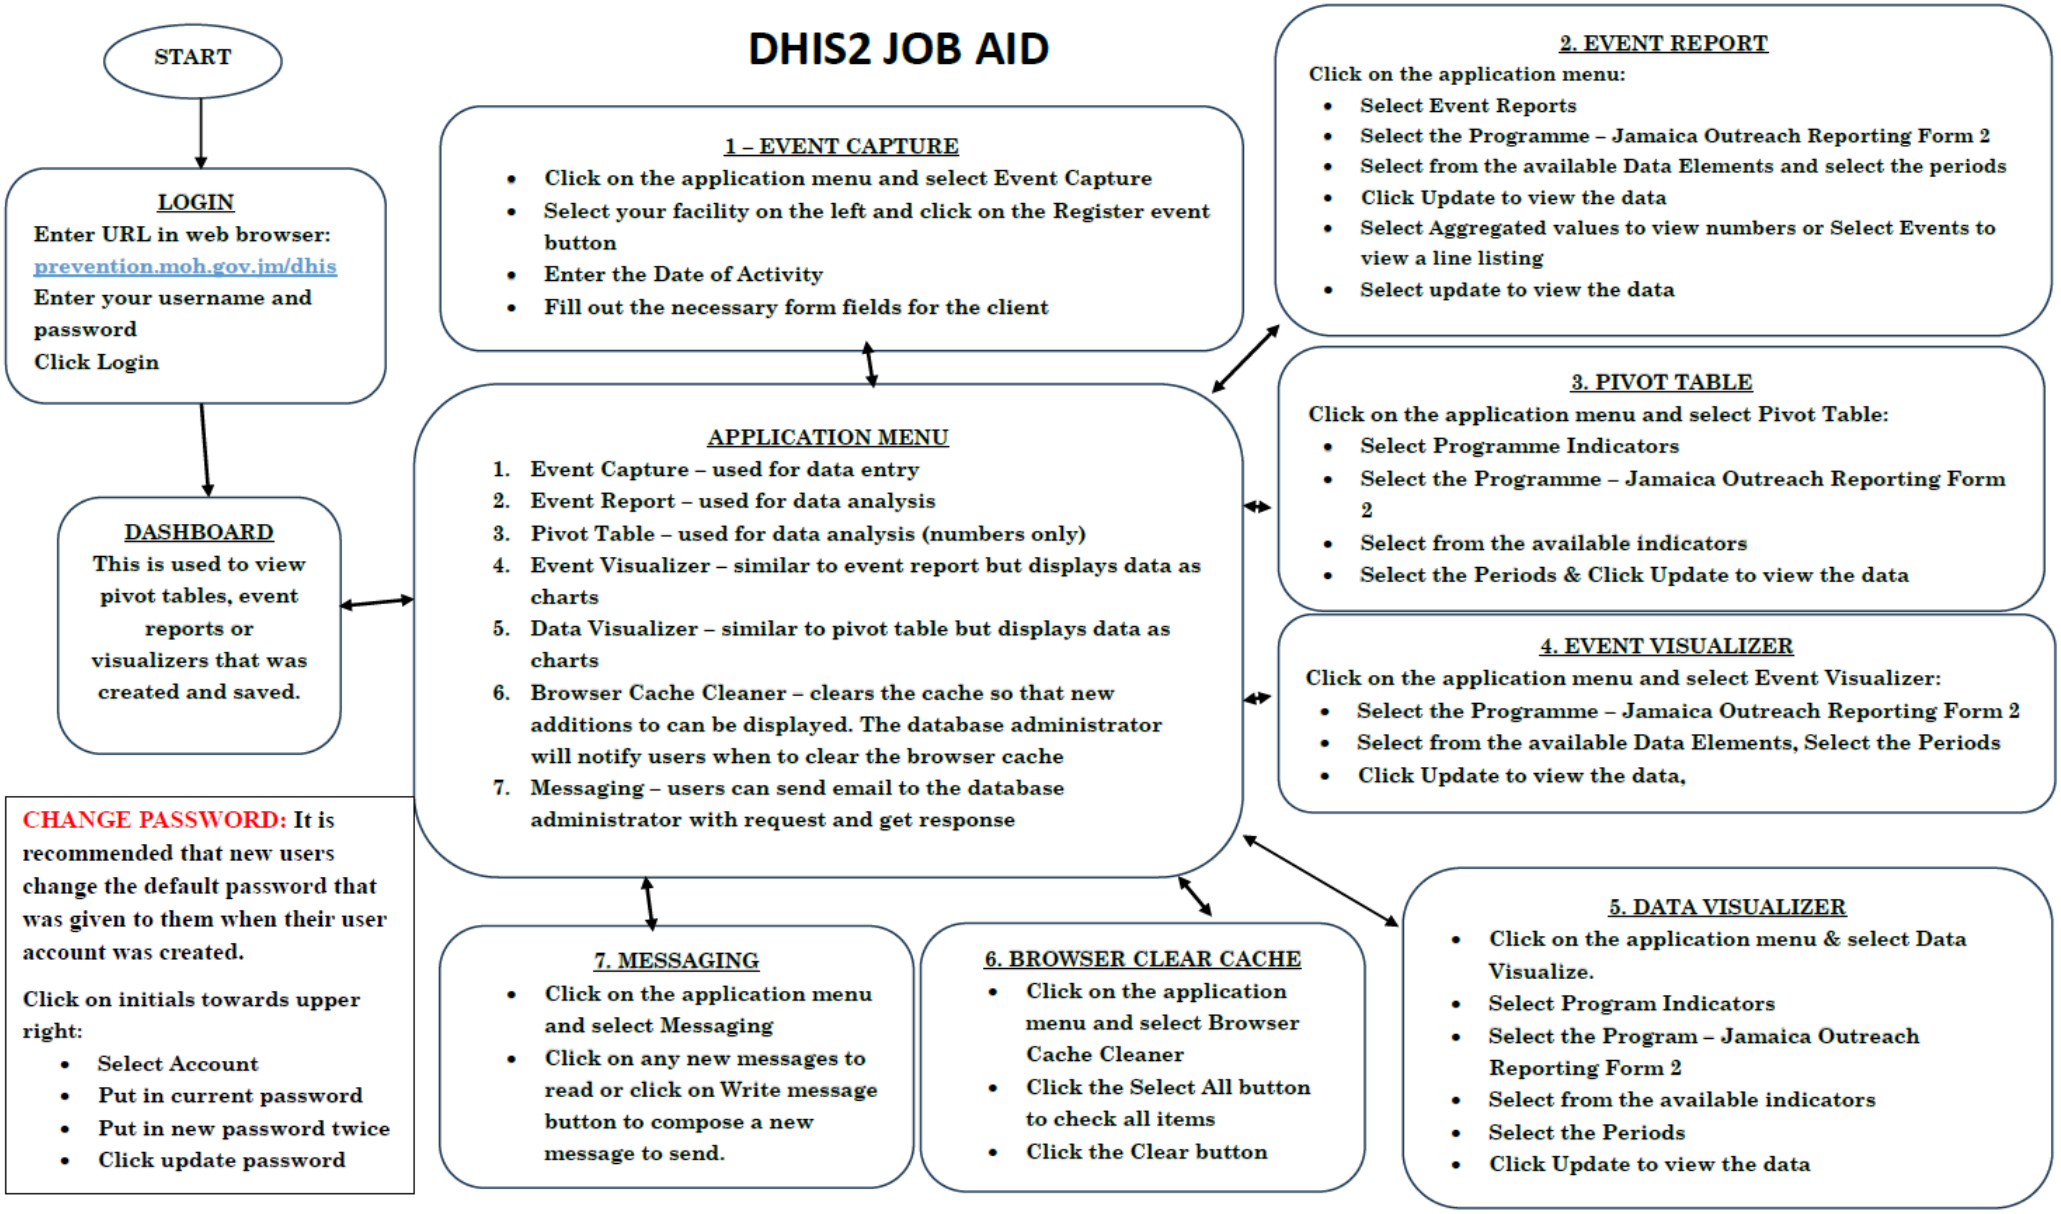

Confidentiality and security are critical components of DHIS2 data management, as the database contains sensitive personal and programme information. Since outreach registers serve as the primary source of information for DHIS2 data entry, all users must ensure that client information is handled with the highest level of confidentiality and professionalism.

Maintaining strong data protection measures safeguards client rights, strengthens public trust, and ensures compliance with national policies, ethical standards, and applicable health information regulations.

All DHIS2 Users Must:

- Keep all client and programme information confidential.
- Access only records required for assigned duties.
- Never share usernames or passwords.
- Log out of DHIS2 after each session.
- Store outreach registers and source documents securely when not in use.
- Avoid printing unnecessary client information.
- Ensure computer screens displaying client information are not visible to unauthorized persons.
- Report any suspected data breaches or unauthorized access immediately.
- Notify system administrators promptly when staff members are no longer affiliated with the programme or require removal of access.
